

ENTERPRISE SECURITY & DATA PRIVACY

ADDENDUM

Product: RevOps License Leakage & True-Up Engine (v1.0)

Architecture: Self-Hosted / Private Cloud n8n Orchestration

1. DATA PRIVACY & ZERO THIRD-PARTY RETENTION

- **Data Sovereignty:** The RevOps True-Up Engine runs entirely within your self-hosted or dedicated n8n execution environment. No customer usage data, subscription data, or financial metrics are ever transmitted to, processed by, or stored on external third-party servers managed by the workflow vendor.
- **Ephemeral Execution:** All array matching, seat delta calculations, and payload transformations occur strictly within volatile runtime memory during workflow execution. Data is discarded immediately upon pipeline completion.

2. API AUTHENTICATION & CREDENTIAL SECURITY

- **Transport Layer Security:** All API communication between n8n, Google Sheets, Notion, and Stripe is strictly mandated over TLS 1.3 encrypted HTTPS endpoints.
- **Least-Privilege Scope Requirements:**
 - **Stripe API:** Requires restricted secret key scoped to `read: subscriptions`, `write: invoiceitems`, and `write: invoices`. Full admin keys are never required.
 - **Google Sheets:** Requires standard OAuth2 read/write access limited to the specific Data Layer file ID.
 - **Notion API:** Requires Internal Integration Token explicitly shared only with the Revenue Recovery Command Center database page.
- **Credential Vaulting:** API tokens and private credentials remain encrypted at rest inside your n8n internal credentials database (AES-256-GCM).

3. COMPLIANCE & FINANCIAL SAFEGUARDS

- **Idempotent Stage-Only Invoicing:** The engine is hard-coded to execute creation of Draft Invoices (`auto\_advance: false`). It possesses no programmatic authority to auto-charge cards, finalize invoices, or trigger instant customer debits without explicit human authorization.
- **Audit Trail Integrity:** Every raw execution appends an immutable, timestamped record into the RECON_LEDGER sheet tab, ensuring full compliance for SOC 2 Type II revenue accounting audits.
